Segments: This value (' seg ') defines the accuracy (number of segments) in your shear force (Sx) and bending moment (Mx) co-ordinates, which can be used to ascertain the bending moment and/or shear force at discrete points anywhere along the beam or to plot your bending moment and shear force diagrams. This value may be set to any integer between 20 and 200 but will default to 50 if it is left blank or set to zero.
