However, molecular functional imaging (MFI) techniques entail the visualisation and quantification of biochemical and physiological processes occurring during tumorigenesis, and thus has the potential to play a key role in heralding the transition from the concept of 'one size fits all' to 'precision medicine'.

The Continuing Evolution of Molecular Functional Imaging ...

Recently evolved concept of personalized imaging in oncology has come into sight as a promising approach to address unmet needs of the present cancer medicine. The current driving forces of molecular imaging in the clinical setting worldwide are positron emission tomography (PET) and single photon emission computed radiography (SPECT) imaging.
